MOLECULAR DIAGNOSTICS TEST RESULT UNITS
Canine Distemper Virus RealPCR a POSITIVE
CDV Quantity b 11 THOUS/SWAB
Fold Difference From Cutoff 0.10
LOW CDV POSITIVE

CDV viral load is low, which is possible with early infection, resolving infection, or vaccine interference. If the dog has been vaccinated with a modified-live CDV strain within the past 2 weeks, the positive CDV result may be due to detection of the vaccine strain. If the dog has not been vaccinated recently or received the recombinant CDV vaccine, the positive CDV result is consistent with the early or recovery phases of a wild-type infection, particularly if there is known exposure or compatible clinical signs; re-testing in 7-10 days is recommended.
